2017 ANNUAL CONFERENCE OF THE EUROPEAN SOCIETY OF CONSTRUCTION LAW

BIM – BUILDING INFORMATION MODELING

UNIVERSITY OF FRIBOURG, SWITZERLAND, 3 NOVEMBER 2017

The focus of this year's conference will be on BIM (Building Information Modeling). BIM is far more than just a new design tool. By encouraging contractor involvement at an early stage of construction planning and promoting a much higher degree of transparency and accessibility of design information, BIM clearly has the potential to profoundly change the way the construction industry operates. While BIM is already beginning to take root in many countries around the world, a wide range of questions remain to be addressed.

The ESCL conference will provide a forum for discussing those issues from a comparative perspective, offering deeper insight into the changes taking place – helping you to more fully understand the direction in which things are moving and be better prepared for the legal challenges to come.

THE VENUE

The conference will be held at the University of Fribourg, Switzerland (www.unifr.ch). The University is a bilingual institution (French/German) located in the predominantly French-speaking city of Fribourg. It is conveniently reachable by trains running directly from both Zurich and Geneva airport.
